

Hand Hygiene Solutions

Healing Hands Need Help, Too.

Almost 80% of infectious diseases are transmitted via touch

One of the most common modes of transmission is via the hands of healthcare professionals.¹

Hand hygiene compliance rates are often very low

Outpatient clinics: Studies have shown that hand hygiene frequency amongst clinic staff ranges from 11-50%.^{2, 3}

Product selection matters

Products containing aloe vera, vitamin E and other emollients can help to soothe and protect hands and even promote hand hygiene compliance.⁴

Designed for the demanding needs of healthcare professionals, Clorox Healthcare® provides a wide array of hand hygiene solutions formulated for frequent hand hygiene in healthcare settings.
