

Clorox Healthcare® Cold & Flu Guide

Help Wipe Out Cold and Flu Viruses with Clorox Product Solutions

The Cost of Influenza in the United States:

Each year in the U.S., the flu results about 17 million missed employee workdays and translates into \$7 billion in sick days and lost productivity.¹ During the 2017-2018 flu season, there were an estimated 900,000 flu-related hospitalizations and 80,000 flu-related deaths.²

Cold and Flu Viruses Can Spread Via Contaminated Hands and Surfaces

A single hospital surface can be touched up to 266 times per hour.³

Influenza viruses can survive on hard surfaces up to 48 hours.⁴

On average, adults have 2-3 colds per year and most recover in 7-10 days.⁵

Influenza virus H1N1 lasts longer outside of the body when it is surrounded by mucus and other airway secretions.⁶

Immunocompromised patients are at a higher risk for acquiring an infection

Close contact with sick individuals can further spread cold and flu viruses

Regular cleaning and disinfection of staff and public areas can help prevent the spread of pathogens
